

# New Z Series Pump

Ampco is pleased to announce the introduction of a new pump to the Z Series marine and industrial product line. The ZCH2 5 x 4P is the largest 3500 rpm pump that we offer!

## 5 x 4P Curve

The ZCH2 5 x 4P is designed with a double volute casing to reduce radial load when the pump is running closer to shut-off. As with all Z Series pumps, the 5 x 4P is available in nickel aluminum bronze, Duplex 2205 and 316 stainless Steel. Pricing is available at [www.ampcopumps.com](http://www.ampcopumps.com).

## New Product Development

We are always interested in your suggestions for new pump development. If you know of applications where the existing pumps are too expensive or only available in cast iron, let us know and maybe we can help. We are currently considering an 8 x 6 Z series pump for flows up to 2500 gpm. If you have applications requiring this flow please let us know.

Please Contact your regional sales managers for additional information on the ZCH2 5 x 4P or with any new product suggestions.
