CHALLENGE

A distillery came to Ampco recently looking to solve a problem they had blending sugars in cooler temperatures without the ingredient settling out.

SOLUTION

Ampco Pumps truly does it all! We supplied an explosion proof (XP) PIR15 SHEAR-blend unit to mix and dissolve the sugar taking care of issue number one and solved an additional problem in the process. The distillery no longer needs to carry heavy bags of sugar and other ingredients to the top of a tank to induce. The SHEAR-blend unit offers them ground level induction!
