CHALLENGE

This food processor had been using outdated pump models that were not approved by EHEDG or 3A, and they were looking for ways to upgrade and improve production.

SOLUTION

Ampco worked with the distributor to offer a pump that was suitable for blending soups and salsas. It was important to limit shearing of these products, so Ampco provided an SBIR20 shear pump. The processor is now getting the correct amount of shear for their product, and they were able to eliminate their takeaway pump.
